As Malaysia moves towards knowledge based economy, patent protection has become vital and important for inventors and technology creators to protect their invention and eventually reaping optimum return from the patented inventions.

This is only possible if the patent particularly the claims are well drafted and complete. A patent document is a legal document that has a specific structure according to the laws. By being aware of the structure of the patent document and knowing the drafting strategy and techniques, and inventor or patent owner can obtain a broader scope of protection and consequently exclude others from its define territory. Having a patent does not necessarily means having the desired protection.

This workshop will reveal the strategy and technique to broaden the scope of protection of a patent.

This four-day program comprises of a highly interactive sessions on guiding the participants on drafting the patent specifications particularly the claims.

WHY?

To increase the chance of obtaining a patent
To obtain optimum protection for a patent
